TERRA COTTA

BALUSTRADES, PANELS OR PERFORATED TRACERY ORNAMENT,
TERMINALS, ETC. FOR PARAPETS, TERRACES, ETC.,

MANUFACTURED BY

JOHN MARRIOTT BLASHFIELD,

STAMFORD, LINCOLNSHIRE.

PUBLISHED BY J. M. BLASHFIELD, STAMFORD,

February, 1868.

WILL BROTHERS, PRINTERS, CASTLE STREET, HOLBORN, LONDON, E.C.

EXAMPLES
OF
TERRA COTTA BALUSTRADES, PANELS OR PERFORATED TRACERY
ORNAMENT, TERMINALS, ETC. FOR PARAPETS, TERRACES, ETC.,

MANUFACTURED BY

JOHN MARRIOTT BLASHFIELD,
STAMFORD, LINCOLNSHIRE.

These examples are all drawn to scale as described; but, as all plain round Balusters are wrought by machine, any variation in the design of a circular Baluster can be made without increase of cost.

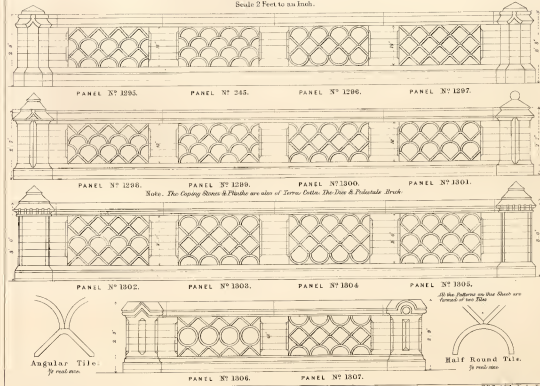

The Panel Ornament is usually enriched on one face only, but, if required, both faces can be made alike; this, however, adds one-third to the price.

The Capping and Base Mouldings are made in 18 to 24-inch lengths; longer lengths are made, but the price increases with increase of length. The Mouldings are ground and rubbed to a true face, similar to fine grained stone; they are hollow, but are sufficiently strong for all purposes. If it is desired to make them solid, they should be filled in with good old mortar, or Roman cement and sand. *Portland Cement should not be used for filling in the interstices of Terra Cotta Work, as it is invariably disposed to expand in hardening, and, frequently, when used for such purpose, bursts the work.* These same remarks apply to the filling in and fixing of Vases and Terminals.

In future Numbers, examples of Vases will be shown drawn to a larger scale; also examples of Trusses, Consoles, Brackets, Columns, Cornices, Jamb and other Mouldings for Doors, Windows, &c.
